

Patient Progress Report

Patient Name: John Doe

Date of Birth: January 1, 1980

Report Date: October 15, 2023

Physician: Dr. Sarah Smith

Treatment Overview

Diagnosis: Chronic Asthma

Treatment Plan: Inhaled corticosteroids, long-acting beta-agonists, and regular follow-ups.

Progress Summary

Since the last report, the patient has shown a significant improvement in symptoms. The frequency of asthma attacks has decreased from 3 times a week to once a week.

Medications

- Fluticasone inhaler - 2 puffs daily
- Salmeterol inhaler - 1 puff twice daily
- Albuterol inhaler - as needed for rescue

Side Effects

The patient reports mild throat irritation from the fluticasone inhaler, which will be monitored.

Next Steps

The patient is advised to continue the current medication regimen and schedule a follow-up appointment in 6 weeks for further evaluation.

Physician's Notes

Overall, the patient's condition is stable, and adherence to the treatment plan is commendable.
