

# Catheter Troubleshooting Tips for Emergencies

Dear [Recipient's Name],

In the case of an emergency with catheter usage, please refer to the following troubleshooting tips:

## 1. If the catheter is blocked:

- Check for kinks in the tubing.
- Attempt to flush the catheter with sterile saline.
- Contact a healthcare professional for further assistance.

## 2. If there is leakage:

- Examine the site for signs of infection or irritation.
- Ensure that the catheter is properly secured.
- Replace the catheter if necessary.

## 3. If the patient experiences discomfort:

- Assess the positioning of the catheter.
- Check for signs of swelling or redness.
- Consult with medical staff if discomfort persists.

For any further questions or concerns, please do not hesitate to reach out to healthcare professionals.

Sincerely,

[Your Name]
