

# Summer Climate Control Recommendations

Date: [Insert Date]

Dear [Tenant's Name],

As we approach the summer months, we want to ensure that your living environment remains comfortable and energy-efficient. Below are some recommendations for managing climate control in your space:

## 1. Set Air Conditioning to a Higher Temperature:

Consider setting your thermostat to [suggested temperature, e.g., 78degF] to balance comfort and energy savings.

## 2. Utilize Ceiling Fans:

Running ceiling fans in a counterclockwise direction can help circulate cool air more effectively.

## 3. Close Curtains and Blinds:

Keeping curtains and blinds closed during peak sunlight hours can help reduce indoor temperatures.

## 4. Regular Maintenance:

Ensure that air conditioning units and filters are cleaned or replaced regularly for optimal performance.

## 5. Limit Appliance Use:

Avoid using ovens and other heat-generating appliances during the hottest parts of the day.

We appreciate your cooperation in implementing these recommendations. If you have any concerns or require assistance with your climate control system, please do not hesitate to reach out.

Best regards,
