

# Attic Ventilation Compliance Guidelines

Date: [Insert Date]

To: [Insert Recipient Name]

Address: [Insert Recipient Address]

Dear [Insert Recipient Name],

We are pleased to provide you with the compliance guidelines for attic ventilation as part of your DIY project. Proper ventilation is essential for maintaining a healthy attic environment and preventing issues such as mold growth and damage to roofing materials.

## Guidelines for Attic Ventilation

- Ensure a minimum of 1 square foot of ventilation for every 150 square feet of attic space.
- Maintain a balance of intake and exhaust vents for optimal airflow.
- Utilize soffit vents for intake and ridge or gable vents for exhaust.
- Avoid blocking any vents with insulation or debris.
- Consider installing powered attic fans if natural ventilation is inadequate.

Please make sure to follow these guidelines to ensure compliance and the longevity of your attic's structural integrity. If you have any questions or require further assistance, feel free to reach out.

Sincerely,

[Your Name]
