

# Welcome to the Team!

Dear [New Team Member's Name],

We are excited to have you join our team! As part of your onboarding process, we would like to provide you with an overview of our system architecture to help you understand the components and interactions that make up our platform.

## System Architecture Overview

Our system is designed with a microservices architecture, consisting of the following key components:

- **Frontend:** Built using ReactJS, this component interacts with users and communicates with backend services via REST APIs.
- **Backend Services:** Implemented in Node.js, these services handle business logic and data access.
- **Database:** We use MongoDB for storing user data and application state.
- **Message Queue:** RabbitMQ is utilized for communication between microservices.
- **Load Balancer:** Nginx serves as a reverse proxy and load balancer to enhance performance and reliability.

For a detailed diagram of our architecture, please refer to the link provided in the onboarding document.

If you have any questions or need further clarification, don't hesitate to reach out to your onboarding buddy or the team lead.

Welcome aboard!

Best regards,
