

Dear [Patient's Name],

We understand that considering surrogacy as a fertility treatment option can be a significant decision. We are here to provide you with information about the various fertility treatment options available to you as you explore this journey.

Fertility Treatment Options:

- **In Vitro Fertilization (IVF):** This process involves retrieving eggs from your ovaries and fertilizing them with sperm in a laboratory setting, then transferring the embryos into the surrogate's uterus.
- **Egg Donation:** If there are concerns with egg quality, using donor eggs might be a viable option for IVF.
- **Sperm Donation:** In cases where paternal factors may contribute to infertility, donor sperm can be utilized for fertilization.
- **Embryo Donation:** If you have surplus embryos from a previous IVF cycle, they can be donated to a surrogate.

Next Steps:

We encourage you to schedule a consultation with our fertility specialist to discuss these options in detail, answer your questions, and tailor a plan that aligns with your goals.

Please feel free to reach out at [Phone Number] or [Email Address] to set up your appointment.

Sincerely,
[Your Name]
