

Dermatological Assessment Findings

Patient Name: John Doe

Date of Assessment: October 10, 2023

Referring Physician: Dr. Smith

Subjective:

Patient presents with complaints of persistent rash on the left forearm for the past 2 weeks.

Objective:

Inspection: Well-defined erythematous plaques with scaling.

Palpation: Lesions are raised and firm to touch.

Location: Left forearm.

Assessment:

Based on clinical findings, the differential diagnosis includes psoriasis, eczema, and contact dermatitis.

Plan:

- Topical corticosteroids to be applied twice daily.
- Follow-up appointment scheduled in 4 weeks.
- Patient advised to avoid known irritants.

Provider Name: Dr. Jane Doe

Specialty: Dermatology
